

Integrated Telematics to Track Your Entire Fleet

INTEMPO MX

Why InTempo MX?

Connected assets deliver unmatched visibility. Combine rental data and telematics data in one easy-to-use platform, reducing unplanned downtime, deterring theft, and getting machines rent-ready more quickly.

Fast and Efficient Setup

Go live with less manual work. Each asset - be it part of your rental fleet, a dealership asset, or customer-owned equipment - receives a unique key for automated creation & data synchronization.

Fully Configurable Displays

Cut through the noise and focus on what matters most. Show your employees the most important information for their job - from location and rental status to machine status and usage data.

Share Data With Your Customers

Provide best-in-class customer service, giving your customers the insights they need to better manage their rentals. Share only what you want to share and hide confidential data from the customer's view.

Over the Road Applications

Track location, usage, faults, driving behaviors, and PM scheduling for light-duty assets (class 1-5 automobiles and pickups) and heavy-duty assets (class 5-8 vehicles and trucks).

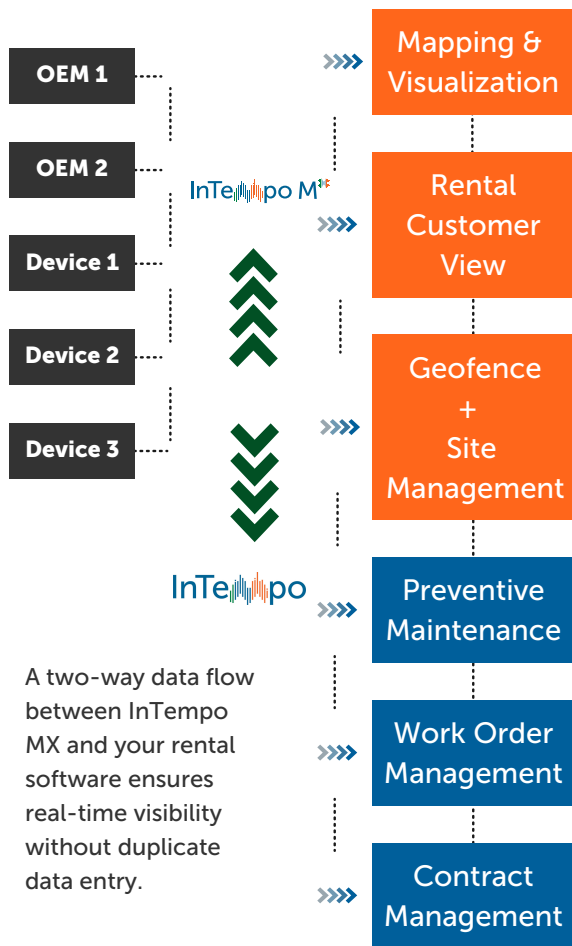

Towables, Tools, and Attachments

Track assets with or without a constant 12V power source. Use battery-powered devices for non-powered trailers and attachments or standard devices to track trailers, towables, & specialty equipment.

Off Highway Machinery

Monitor equipment location, utilization, engine performance, and faults with ruggedized hardware designed for the task.

The InTempo MX Data Flow

Integration Unlocks the Value

Use telematics to improve nearly every aspect of your business - from preventive maintenance and work order management to contract management and customer service. Everything is accessible from a single source of record; no more hunting down data across disconnected platforms. Key automations, such as delivery and pickup notifications, further reduce manual work.

Seamlessly Incorporate Third Party Devices

Already use OEM telematics hardware on some (or all) of your fleet? Seamlessly pull data from third-party devices without having to switch out existing devices at go-live.

Drag & Drop Geofence Creation

Create and update geofences with a few clicks. Configure alerts without in-depth IT knowledge.

Support Connected Site Initiatives

Deliver more value by helping your customers consolidate their own people, processes, and information. Automatically assign machines to appropriate job sites, then share your telematics data with approved third parties directly from your map interfaces.

Test It Out With Your Own Machine Data

Ready to see InTempo MX in action? We can set you up with a dedicated sandbox environment that pulls real-world data. Contact us to learn more:
